

Paper Plate Yarn Weaving Apple Craft

Supplies:

- paper plate
- red paint
- scissors
- paint brush
- white yarn
- plastic yarn needle (optional)
- black construction paper
- glue
- wooden clothespin
- green tissue paper

Instructions:

Step 1: Paint the outside of the paper plate red and let it dry.

Step 2: Cut several notches around the edges of the plate. Here is the trick I was mentioning above: It has to be an odd number of notches. If you count mine you will discover 12 and yes, I know this is not an odd number. What can I say, it has been a trial and error for me. Because of this, I had to skip while weaving, which makes the entire process more difficult.

Step 3: Wrap yarn around the paper plate, sliding it through all the slits and tie it at the back of the paper plate.

Step 4: Cut yarn into long strips and tie one of these strips to the center of the criss-crossed yarn in the middle of the plate.

Step 5: Weave the yarn strip under and over the yarn on the paper plate until you finish it. You may want to use a plastic yarn needle for an easier weaving experience. If you need more yarn, tie two strips together. Continue till you reach the red painted edges.

Step 6: Cut 3 or 4 seeds out of black construction paper and glue them on top of the yarn.

Step 7: Make two little leaves from tissue paper and clip them to the paper plate with a wooden clothespin.
